Vsebina raziskave

Ključne besede:

respondent's education (ISCED 97 classification), sources of income, number of economic activities, employment status, duration of the economic activity, working time scheme, willingness to work more/less hours, reasons to work more/less hours, frequency of work overtime, place of work, varying places of work, autonomy in flexible work arrangements, type of contract with the employee, satisfaction with the economic activity, members of the household, education of members of the household, working activity of members of the household, hours of work, domestic work division among members of the household, voluntary work, unpaid work, work vs. family values, agreement among household members about family vs. work obligations, where are decisions in a household taken, employment changes, standard of living of the household, source of income and incomes of the household, what household owns, prospective economic situation of a household, retrospective economic situation of a household, gender, employment sector, occupational status, religious congregation, ethnic affiliation

Vsebinska področja CESSDA:

LABOUR AND EMPLOYMENT

SOCIAL STRATIFICATION AND GROUPINGS - family life and marriage

Vsebinsko področja CERIF:

Sociology of labour, sociology of enterprise

Individual respondents economic activities

Individual flexibility (time, place, conditions)

Composition of the household

Work portfolio of household members

Domestic work

Voluntary work

Work values

Potential for flexibility

Economic resources of households

Povzetek:

The aim is to look at how different kinds of work are combined within households and how social and labour market policies in different countries affect this. With debates about flexibility taking place in many European countries, the project considers what effects different policies regarding flexible employment might have for the daily lives of people and families. An important aspect of this is the gendered division of work both inside and outside of the home and the combinations of paid and unpaid work. The project is based upon a sample survey of people in each country who are asked about their own experiences of different kinds of employment along with those of other members of their households. The questionnaire considers paid as well as unpaid work and the strategies through which households approach these different kinds of work. Flexibility is construed as flexibility of time, place and conditions of work. The questionnaire is designed to cover the way in which the activities of different household members combine, including both paid and unpaid work, work in the formal and in the black or grey economy (a very important field in some countries). It is also designed to look at attitudes to flexibility as well as behaviour. For this reason, we have been concerned to look at all forms of work, including domestic work, child care, work in the informal economy, self provisioning and additional casual and occasional jobs in addition to various kinds of regular employment. Each of these issues has very different connotations in the different parts of Europe. The first part of the questionnaire relates to the individual responses and in order to try to understand the combination of different types of economic activity, we have asked in some detail about various sources of income. There are then some more detailed questions about the main economic activity, including the kinds of hours worked, places worked and working conditions. There are some

questions designed to elucidate not just under what conditions a person is working, but also the reasons for that particular set of conditions and whether it is chosen or forced upon them. Finally, respondents are asked about how happy they are with these arrangements and if they would want to change them. Similar, although less detailed questions, are asked about the second, third and fourth economic activity of the respondent. The assumption is that the flexible work would more likely be found in the second, third or fourth activity and that this might be combined with a more stable first activity. The second part of the questionnaire uses a series of grids to ask about other members of the household. Here the information collected is less detailed, because it is collected from only one person in the household. The composition of the household forms the topic of one grid. The different kinds of work undertaken by different household members are the subject of the second grid. The third grid looks at a variety of different domestic tasks and asks respondents which household member, or who outside of the household carries out these tasks. The next grid considers voluntary and unpaid work for others outside of the household by different family members, with the intention to get some measure of social capital in different countries. It is assumed that whereas formal social capital in the sense of contribution to voluntary organisations may be low in CECs, informal help for others might nevertheless be well developed. The next grid attempts to look at how key household decisions are made and who has the most important decision making role in this respect. Is it the key wage earner? Or is it the most senior person on the household? In this part of the questionnaire we should be able to explore the extent to which different contributions to the household may result in different balances of power within the household. The third section of the questionnaire is devoted to work values. It considers the extent to which people are happy about their various economic activities and the extent to which these might impinge upon or help family life. Finally, we try to look at sources of discord and tension in the area of work and household with particular respect to flexibility. This part of the questionnaire should enable us to better understand the extent to which flexibility may be a help or a hindrance to the organisation of family life and the extent to which it may lead to conflict. The next section of the questionnaire considers the potential for flexibility, by asking under what conditions people would move house, move jobs or retrain. Another table considers job changes since 1989 and this would be particularly relevant in CEC countries. This would give some indication of how flexible the respondent was until now. The final questions in the questionnaire measure the economic resources of the household, including not only income but also other resources such as consumer goods, land and domestic animals owned, access to telecommunications and so on. Document status: 4 - Full Study description and XML DDI Codebook Data description with full questions text. Abstract:

ni podatka

Metodologija

Časovno pokritje:

February 2001 - June 2001

Čas zbiranja podatkov:

The surveys were conducted between February - and June 2001.

Čas izdelave:

2002

Država:

United Kingdom, Netherlands, Sweden, Slovenia, Czech Republic, Hungary, Romania, Bulgaria

Geografsko pokritje:

Territory of corresponding countries.

Najmanjša geografska enota:

region

Enota za analizo:

individual
household

Populacija:

The target population were between 18 and 60/65 although in Slovenia and Romania there was no upper age limit. For the combined data set those above aged 65 in those countries were excluded.

Vrsta podatkov:

Survey data

Izključeni:

ni podatka

Zbiranje podatkov je opravil:

United Kingdom: NFO World Group
Netherlands: Desan market research
Sweden: Statistics Sweden
CJMMK - Slovenia: Center za raziskovanje javnega mnenja in množičnih komunikacij = Public Opinion and Mass Communication Research Centre, Univerza v Ljubljani = University of Ljubljana
Czech Republic: STEM, s.r.o.
Hungary: TÁRKI Social Research Centre
Romania: The Institute for the Study of the Quality of Life

Časovna opredelitev podatkov:

Cross-section

Tip vzorca:

United Kingdom: Postcode Address File (PAF). Small Users, PAF provides a sample of addresses. Each address has an equal chance of selection, regardless of the number of people living at that address. The probability of selection of individuals at a selected address is inversely proportional to the number of eligible people at the address. Since this bias is known about in advance, it is easy to correct for it by collecting the number of eligible adults at the address as part of the questionnaire data, and using this as a weighting variable. Finally, Kish grid method was used to identify a respondent.

Netherlands: Stratified/quota sample.

Sweden: Random sample of population 18-65 drawn from the national Swedish register of residents.

Slovenia: Central Register of Population (a list of names and addresses constantly updated by public administration) is employed as a sampling frame. The sample is two-stage stratified random sample from Central Register of Population, where every population unit has equal probability of selection. First stage PSU selection is made by probability proportional to size of CEA (Clusters of Enumeration Areas). CEA are stratified according to 12 regions*6 type of settlement. At second stage systematic random selection inside CEA brings fixed numbers of persons with name and address.

Czech Republic: Database of household cost payers – SIPO. Yes, known - and equal – probability. Household.

Nearest birthday of a complete list of household members. Higher proportion of old age group Higher proportion of single member households

Hungary: Hungarian population census Age 18-65, Yes, known - and equal probability. The sample was created in two steps. First they have stratified the localities according the number of adults living in each of them. From these nine strata of the localities are chosen by random sampling method. In the second step they have chosen individuals from the set of those 93 settlements.

Romania: From the electoral list. From other lists (such as agricultural register). Random route method.

Način zbiranja podatkov:

Personal interviews; Netherlands: Computer assisted telephone interview (CATI); Sweden: Self completed mail survey ;

Uporabljeni inštrument:

standardised questionnaire in majority language in each country

Opis zbiranja podatkov:

Trained interviewers visited respondents at their home.

Uteževanje:

The "weight" variable includes nation specific weighting adjustment for United Kingdom, Netherlands, and Hungary for the individual level data file. Details:

Očiščenje podatkov:

In every file there were some deviations from the main questionnaire. In merging the data files we have tried to preserve where possible the original data but in addition we have tried to correct the data in order to make it into a common data set.

ADP performed detailed processing of incoming data files. Final distribution version data file includes few additional harmonised variables. Some but not all country specific variables were excluded. The data was processed according to the standard ADP processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to missing data values (do not know, no answer). -Some variables in data set have been recoded for reasons of confidentiality. Users should contact the archive for information on obtaining access.

Stopnja sodelovanja:

United Kingdom: 48%

Netherlands: 15%

Sweden: 69%

Slovenia: 65%

Czech Republic: 50%

Hungary: 65%

Romania: 85%

Bulgaria: 87%

Uvrstitev raziskave po pomembnosti:

9: highest range, comparative or continuous research, influential populations, with methodological excellence

ID: **ID_C** Oznaka: **Identifier of the individual household member** Section 2. Household Grids Instructions to interviewers: Section 2 contains a series of questions designed to obtain information about all household members' activities, going through each person in turn. It is organised as a series of grids.. Ask about each person in turn for Grids 2 and 3 . P0 is the respondent, but they have already been asked all the questions in the previous section, so you need only go through other household members. Begin by asking the respondent about the kinship, sex, age, educational level, additional education, income sources, economic activity etc of P1.going on from Grid
